

Samvaad360

A better next conversation.

Borrower context → evidence → reviewable intervention

Verified prototype · 6 October 2026

Lending demonstration · Fictional customer data

The borrower's context gets lost.

Repayment history is only part of the relationship.

01 Structured facts

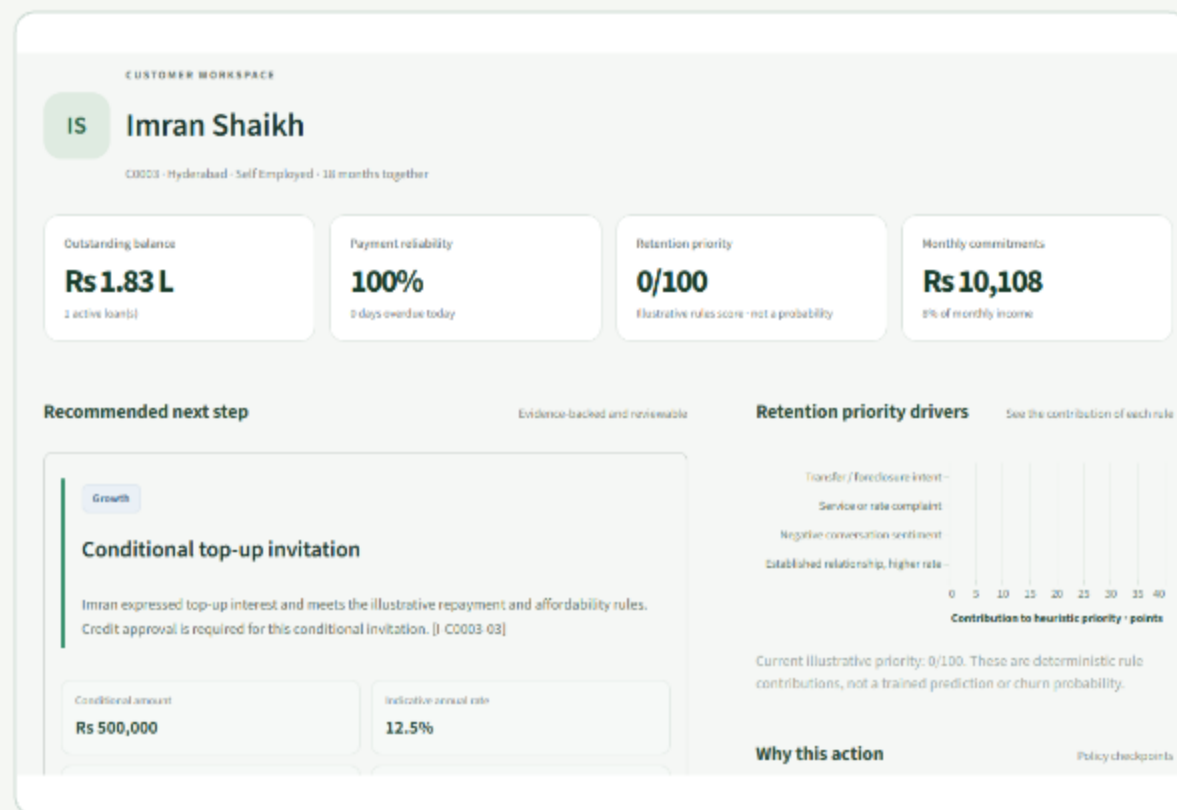

Loans, payments and affordability.

02 Unstructured context

Calls, email and the borrower's words.

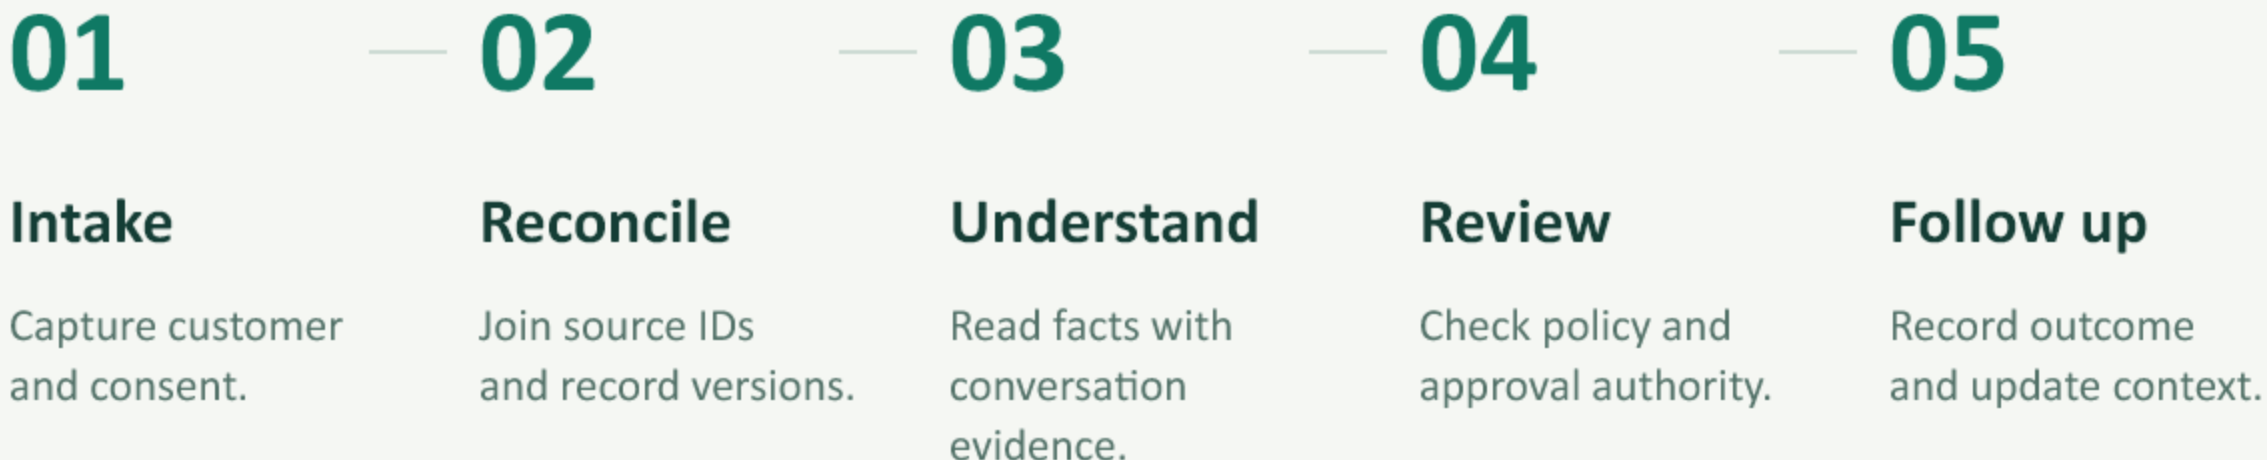

03 Contact preferences

Permission, DND and human follow-up.

One path through the whole relationship.

Each stage carries its source, permission and review state forward.

Public changes stay in one visit. Staff onboarding, source sync and cases persist locally.

The live demo has explicit data boundaries.

LIVE PUBLIC DEMO

PERSISTENT STAFF + BORROWER PORTAL

Public visitors cannot write shared customer data or place telephone calls.

Three capabilities compose the demo.

01

Relationship intelligence

Reconcile customer, loan,
repayment and conversation
records.

02

Policy-aware intervention

Cite evidence, test new context
and route the right review.

03

Guarded automation

Require recorded approval and
preserve a replay-safe audit trail.

CoCo skill definitions included: evidence · generate · approved runner.

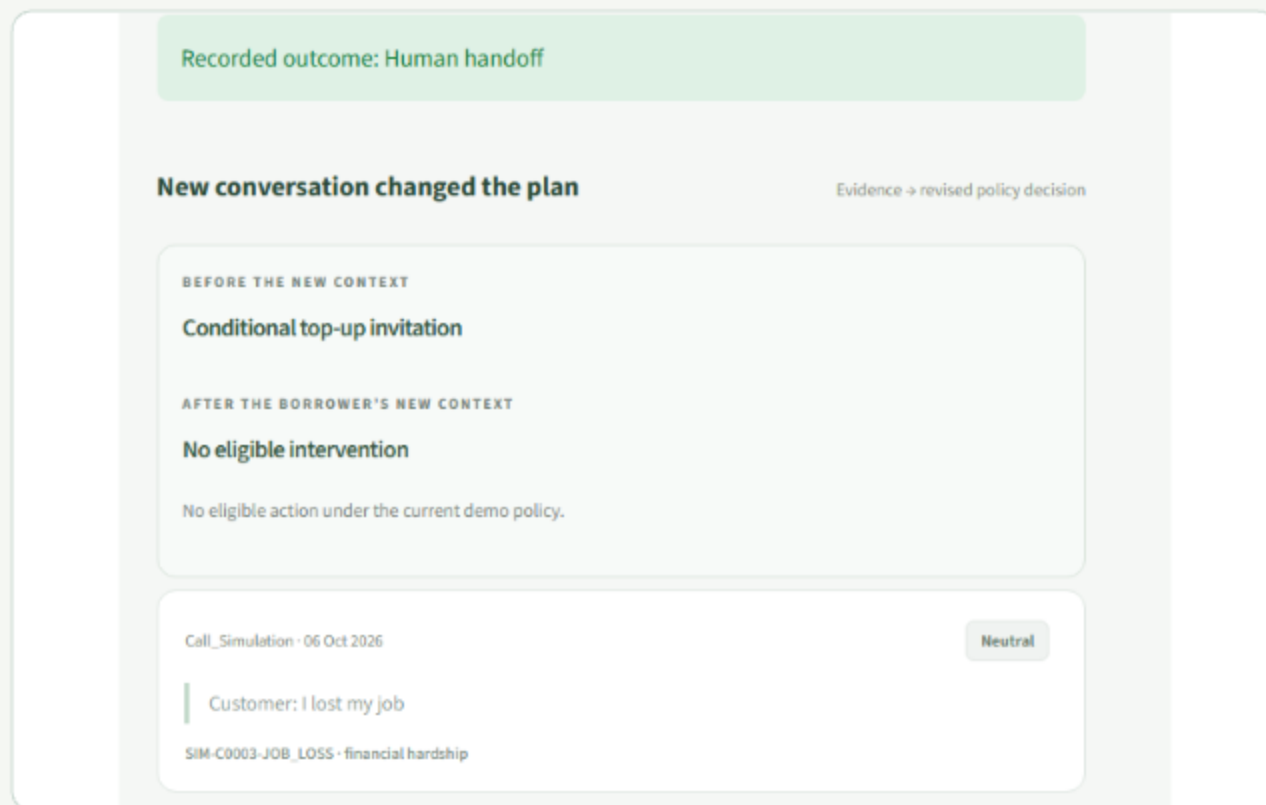

New context changes the recommendation.

BEFORE

**Eligible for a conditional
top-up invitation.**

Borrower reply: “I lost my job.”

**Growth closes.
Supportive human handoff.**

Recorded outcome: Human handoff

New conversation changed the plan Evidence → revised policy decision

BEFORE THE NEW CONTEXT
Conditional top-up invitation

AFTER THE BORROWER'S NEW CONTEXT
No eligible intervention
No eligible action under the current demo policy.

Call_Simulation · 06 Oct 2026 Neutral

Customer: I lost my job

SIM-C0003-JOB_LOSS · financial hardship

Actual hosted browser rehearsal · no telephone call or loan executed

Customer data enters through a reviewed flow.

loan	demo-loan-001	1	new
payment	demo-payment-001	1	new
interaction	demo-interaction-001	1	new

☒ Apply these fictional records to this visit only

Capture → Preview → Review
→ Customer 360

Customer, loan, payment and conversation records join through source IDs and versions.

A clean import is applied explicitly. Conflicts block the batch; a replay does not duplicate it.

Useful actions need enforceable limits.

01 Protect compute

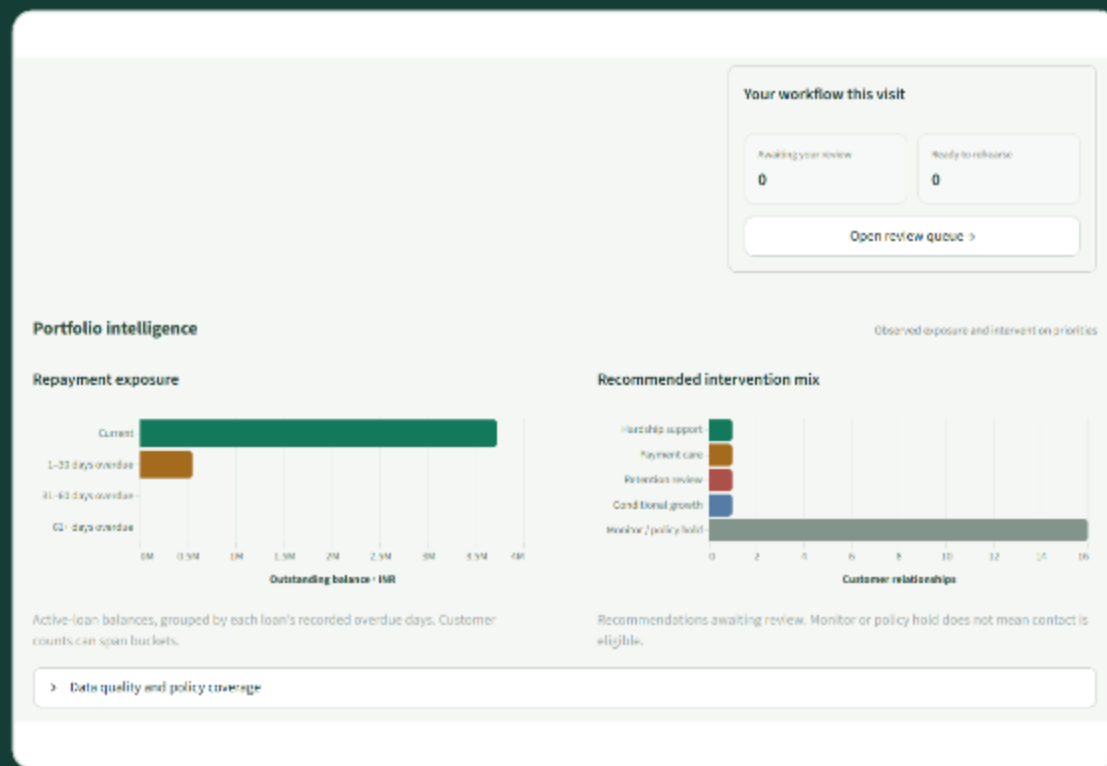

Shared snapshot, fixed SQL and query reservations.

02 Protect the relationship

Consent, DND, hardship and approval gates.

03 Protect execution

Scoped portal links, idempotency and audit records.

Verified workflows. Clear remaining gates.

557

Automated tests

20

Hosted browser checks

6

Private portal checks

LIVE TODAY

Public Snowflake demo, six workspaces, visit isolation and persistent local CRM.

BEFORE PRODUCTION

Private cloud writer · managed operational database + SSO · carrier call proof · CoCo CLI recording

Try the journey. Inspect the evidence.
