Problem Statement : Customer 360 and Next Best Action Engine

Samvaad360 | Problem Brief

Customer 360 and Next Best Action Engine / Lending

Target user and business pain

- Relationship and support officers work across fragmented records.
- Repayment facts alone can miss job loss, disputes and opt-out.

Why the next conversation matters

- A growth offer can become inappropriate after a hardship reply.
- Officers need the reason, cited evidence and a reviewable action.

Implemented response

- Join loans, payments, emails and call transcripts in Customer 360.
- Apply consent, hardship and approval gates before next actions.
- Re-evaluate new context; stop stale offers and route human help.

Domain: synthetic lender servicing; no insurance claims demo.

Samvaad360 | Architecture Diagram

Structured and unstructured data to a guarded next action

Loan / repayment facts + email / call transcript + preferences

Snowflake fictional snapshot → fixed, read-only reader

Python evidence + deterministic policy engine + approval gates

Streamlit: Customer 360 → Review queue → Conversation

Private operational path: FastAPI + persistent SQLite

Reviewed intake / versioned imports / servicing / audit records

CoCo skills: evidence → generate → approved runner

Local CLI + isolated data; native execution proof is pending.

Public changes stay visit-only. Private Snowflake sync is pending.

Samvaad360 | Impact Statement

Measured prototype verification; business uplift not yet measured

Verified today

- 557 CI tests; 20 hosted browser checks; 6 private portal checks.
- 20 fictional customers; six public workspaces; Snowflake reader.

Observable workflow outcome

- A new hardship reply removes an eligible growth proposal.
- The journey, evidence and officer handoff remain explainable.

Scalability and use beyond the demo

- Shared snapshots and query reservations bound app query usage.
- Reviewed source imports and outbox projection support integration.
- Next: managed database, SSO, private sync and carrier validation.

No proven ROI, churn reduction or production readiness claimed.

Samvaad360 | Demonstration and Public Links

Glacier Queries | Arunvpp | Fictional customer journey

Try the working journey

- Customer 360: Kabir Bose → compare a job loss → cited action.
- Imran Shaikh → demo review → conversation → hardship reply.
- Show growth stopping, human handoff and revised evidence.
- Customer hub: onboarding, source preview/import and servicing.

Deployed prototype

<https://samvaad360.streamlit.app/>

Public source, checks and modular CoCo skills

<https://github.com/Cherie05/samvaad360>

Public reviews/conversations are simulations; real calls disabled.

A separate actual CoCo CLI screen recording remains required.
